Rolling shutter The _rolling shutter_ phenomenon, also called the _flickering problem_, is particularly evident in television screens, such as plasma and LCD televisions. In a video, after the source light begins to fall on a scene, the camera's shutter begins to open and close. The shutter is made of individual glass slits, so any light through the slits passes through the scene directly to the shutter at different times during the time the shutter is open. When all the shutter has been opened, the camera advances to the next frame and opens the shutter. Photoshop's Automatic Mode works around this issue to help you see a steady stream of frames. Figure 7-6 shows you the difference between the Rolling Shutter and Automatic modes. FIGURE 7-6: The Rolling Shutter can help you watch a movie or TV program without the wiggling effect of the shutter glass.

[Host-parasite relationships in the life cycle of *Toxoplasma gondii*]. The author discusses in this paper the problems related to the biology and pathogenic role of the parasite *Toxoplasma gondii*. The data are presented about the clinical and subclinical form of the disease with involvement of its tissues and organs, and the peculiarities in the intracellular parasitogenesis. The observed and stated tendencies in the evolution of parasite morphology and its development of pathogenic importance are also discussed. The author has reported the problems of host-parasite relationships in the investigation of an immunological basis of infection with *T. gondii*. It is emphasized the effect of antibody participation in the process of parasitogenesis. Lastly, the author summarizes the data about the range of immune protection in relation to the immunological basis of the processes of immunity.

1. Field of the Invention The present invention generally relates to an image forming device that has the capability to present a preliminary printed page and the capability to form an image on the printed page. More particularly, the present invention relates to an image forming device that prints a page of information and then forms an image, the portion of the printed page from which the image is formed being specifically identified for the purpose of returning the page to the user after a subsequent printing operation.

2. Description of the Related Art As people become more aware of the efficient use of paper products, there is a move by paper manufacturers toward reducing the number of times information printed on papers is reprinted. However, when one desires to print several copies of a single document it may be useful to print the documents on consecutive or staggered pages. Unfortunately, this is not possible with conventional printers. In one method, printing a document on paper, the user would be required to identify the portion of the page from which the image is formed. After the printing is complete, the printed page would be turned over and the other portion of the paper would be completed. Another method would be to select the area of the page that is to be printed before selecting a desired printing or image forming process. However, this increases the chance of having to complete the job multiple times. It is thus an object of the present invention to provide an improved print device that provides the capability to print a preliminary page, which preliminary page is displayed to the user, and can then be used to print additional pages of the same document. It is yet another object of the present invention to provide an improved printing device

Admissible Definition of the First Order Parameter for a Spin-1/2 Heisenberg Chain with One and Two Gap Insertions. We present a new definition of the first order parameter of a one-dimensional Heisenberg chain with gap(s), based on the matrix-product-state method. We validate our definition both numerically and analytically. Our definition is on equal footing with previous definitions. On the other hand, we show how our definition can be applied to a variety of different physical models, using bosonization and conformal field theory as examples.
